

基本輸入和輸出 2(佔分 20 分)

問題描述：

給定 k 個整數，裡面至少會包含 1 個奇數和 1 個偶數，試著計算出現最多次奇數數字且該總和為最大的 A 值，和出現最多次偶數數字且該總和為最大的 B 值，最後輸出 $|A-B|$ 。

輸入說明：

第 1 行為欲讀取 k 個整數，其 k 範圍為 $2 \leq k \leq 100$ 。

第 2 行 k 個整數 m ，其 m 範圍為 $0 \leq m \leq 10$ ，每個整數之間用空格分隔。

輸出說明：

輸出 $|A-B|$ ，其中 A 為 k 個整數中出現最多次奇數數字且總和為最大，而 B 為 k 個整數中出現最多次偶數數字且總和為最大。

範例 1：

輸入：

10

2 2 4 4 5 5 5 3 3 10

輸出：

7

範例 2：

輸入：

10

1 1 3 4 5 6 7 8 10 10

輸出：

18

Basic Input and Output 2 (20 Points)

Problem Description:

Given k integers, which will include at least one odd number and one even number. Calculate the value A , which is the maximum total sum among the most frequent odd numbers, and the value B , which is the maximum total sum among the most frequent even numbers. Finally, output $|A - B|$.

Input Description:

Line 1: An integer k , where $2 \leq k \leq 100$.

Line 2: k integers m , where $0 \leq m \leq 10$, separated by spaces.

Output Description:

Output $|A - B|$, where A is the total sum of the most frequent odd number (choosing the one with the largest sum if there is a tie in frequency), and B is the total sum of the most frequent even number (choosing the one with the largest sum if there is a tie in frequency).

Example 1:

Input:

10

2 2 4 4 5 5 5 3 3 10

Output:

7

Example 2:

Input:

10

1 1 3 4 5 6 7 8 10 10

Output:

18
