

字元出現次數(佔分 20 分)

問題描述：

在資料處理中，我們常常需要計算字串裡特定字元出現的頻率。在這裡的字串包含大小寫英文字母、數字和可見符號組成。試寫出一個程式根據輸入的字串內容，解析出現大寫英文字母、小寫英文字母、數字和符號出現的次數。

輸入說明：

讀取由大小寫英文字母、數字和符號組成的字串 s ，其中 $1 \leq |s| \leq 1000$ 。

輸出說明：

第 1 行輸出字串中出現大寫英文字母的次數。

第 2 行輸出字串中出現小寫英文字母的次數。

第 3 行輸出字串中出現數字的次數。

第 4 行輸出字串中出現符號的次數。

範例 1：

輸入：

My password is #598412_2 3@!.

輸出：

1
11
8
9

範例 2：

輸入：

You, Sue, JJ, and Lee are good friends.

輸出：

5
23
0
11

Character Occurrence Count (20 Points)

Problem Description:

In data processing, we often need to calculate the frequency of specific characters appearing in a string. The strings here consist of uppercase and lowercase English letters, numbers, and visible symbols. Write a program to parse the input string and output the number of occurrences of uppercase English letters, lowercase English letters, numbers, and symbols.

Input Description:

Read a string s composed of uppercase and lowercase English letters, numbers, and symbols, where $1 \leq s \leq 1000$.

Output Description:

The first line outputs the number of occurrences of uppercase English letters in the string.

The second line outputs the number of occurrences of lowercase English letters in the string.

The third line outputs the number of occurrences of numbers in the string.

The fourth line outputs the number of occurrences of symbols in the string.

Example 1:

Input:

My password is #598412_2 3@!.

Output:

1
11
8
9

Example 2:

Input:

You, Sue, JJ, and Lee are good friends.

Output:

5
23
0
11
