

判斷回文(佔分 20 分)

問題描述：

迴文的定義是從左至右或從右至左的內容均相同。試撰寫程式讀取多筆 16-bit 整數，判斷該整數的位元內容是否為迴文，若是迴文則印出該數字，否則忽略。

輸入說明：

第 1 行輸入有 k 個整數內容需要判斷是否為迴文，其中 $1 \leq k \leq 100$ 。

第 2 行至第 $1+k$ 行分別輸入 k 個整數 m ，其中 $-32768 \leq m \leq 32767$ 。

輸出說明：

若整數的位元內容從左至右或從右至左的內容相同，則印出該數字；反之，則忽略該整數。

範例 1：

輸入：

2

-24571

2

輸出：

-24571

範例 2：

輸入：

3

-9

10

4080

輸出：

4080

Palindrome Verification (20 points)

Problem Description:

A palindrome is defined as a sequence that reads the same from left to right as it does from right to left. Write a program to read multiple 16-bit integers and determine whether the bit content of each integer is a palindrome. If it is a palindrome, print the number; otherwise, ignore it.

Input Description:

The 1st line contains an integer k , representing the number of integers to be evaluated, where $1 \leq k \leq 100$. From the 2nd line to the $(1+k)$ line, k integers m are provided respectively, where $-32768 \leq m \leq 32767$.

Output Description:

If the integer's bit content reads the same from left to right as it does from right to left, output the number; otherwise, ignore the integer.

Example 1:

Input:

2

-24571

2

Output:

-24571

Example 2:

Input:

3

-9

10

4080

Output:

4080
