

## Q5 迴文(20 分)

### 問題描述：

迴文為左至右與右至左內容皆相同，例如 1a2a1、1a22a1 都是迴文。

撰寫程式讀取多筆字元，若是迴文輸出 'YES' 否則輸出 'NO'。

### 輸入說明：

總共有  $m$  筆判斷資料，每一行輸入一筆字元  $n$  (字元皆是小寫)，直到讀取到 -1 結束，其中  $1 \leq m \leq 1000$ ， $0 \leq n \leq 99999$ 。

### 輸出說明：

若讀取到的字元為迴文輸出 'YES' 否則輸出 'NO'。

### 範例 1：

輸入：

```
1a2c33fc2a1
ncue0550eucn
5classsalc5
-1
```

輸出：

```
NO
YES
YES
```

### 範例 2：

輸入：

```
154fghga451
987asddsa8asddsa789
7a7
3mnnnnm3
adf956759fda
-1
```

輸出：

```
NO
YES
YES
YES
NO
```

## Q5: Palindrome (20 points)

### Problem Description:

A palindrome is a sequence that reads the same from left to right as it does from right to left. For example, 1a2a1 and 1a22a1 are both palindromes. Write a program to read multiple strings of characters. If a string is a palindrome, output YES; otherwise, output NO.

### Input Specification:

There is a total of  $m$  test cases. Each line takes an input string  $n$  (all letters are lowercase), continuing until -1 is read, which indicates the end of the input. The constraints are  $1 \leq m \leq 1000$  and  $0 \leq n \leq 99999$ .

### Output Specification:

If the inputted string is a palindrome, output YES; otherwise, output NO.

#### Example 1:

Input:

1a2c33fc2a1

ncue0550eucn

5classsalc5

-1

Output:

NO

YES

YES

#### Example 2:

Input:

154fghga451

987asddsa8asddsa789

7a7

3mnnnnm3

adf956759fda

-1

Output:

NO

YES

YES

YES

NO
