

數字遊戲(佔分 20 分)

問題描述：

文華參加一個賺取積分的比賽，比賽場地分成箱子區和幸運池：箱子區有 2 個箱子，分別為箱子 A 和箱子 B，每個箱子都各自代表 20 位數積分，幸運池裡有 M 張紙牌，紙牌內容有數字、大小寫英文字母或符號。幸運池有 1 個條件：紙牌取出後就不能將紙牌放回幸運池，且只能放在標示'?'位數上。比賽開始時，箱子 A 和箱子 B 上的 20 位數字，有些會填上數字，有些會標示'?'符號，參賽者需從幸運池中選取適當的數字填入標示'?'位數，使 2 個箱子的 20 位數積分相加後為最高。

輸入說明：

第 1 列為箱子 A 區的 20 位數內容 $A_{19}A_{18}A_{17}...A_0$ ，而每位數 $A_n = \{1, 2, 3, 4, 5, 6, 7, 8, 9, '?'\}$ 。

第 2 列為箱子 B 區的 20 位數內容 $B_{19}B_{18}B_{17}...B_0$ ，而每位數 $B_n = \{1, 2, 3, 4, 5, 6, 7, 8, 9, '?'\}$ 。

第 3 列為幸運池共 M 張紙牌 P，其中 $20 \leq M \leq 250$ ， $P \in$ 可見字元。

輸出說明：

輸出加總後最高積分值。

範例 1：

輸入：

1000000000000000000?

500000?000000000?321

輸出：

600000900000000008328

範例 2：

輸入：

40708000000?0000000?

300100?0?123456789??

542?% 06654+32571_=/@@0\$*#ErR!~(&BbQ?gqvT20

輸出：

70718070612945678960

Number Game (20 points)

Problem Description:

Wenhua is participating in a competition to earn points. The competition area is divided into a Box Area and a Lucky Pool. The Box Area has 2 boxes, Box A and Box B, each representing a 20-digit point value. The Lucky Pool contains M cards, and the content of the cards can be numbers, uppercase/lowercase English letters, or symbols. The Lucky Pool has one condition: once a card is taken out, it cannot be put back into the Lucky Pool, and it can only be placed on a digit marked with '?'. When the competition starts, the 20 digits on Box A and Box B will have some numbers filled in, and some will be marked with a '?' symbol. The participant needs to select appropriate numbers from the Lucky Pool to fill in the digits marked with '?' so that the sum of the 20-digit point values of the 2 boxes is the highest.

Input Specification:

Line 1 contains the 20-digit content of Box A, $A_{19}A_{18}A_{17}\dots A_0$, where each digit $A_n = \{0, 1, 2, 3, 4, 5, 6, 7, 8, 9, '?'\}$. Line 2 contains the 20-digit content of Box B, $B_{19}B_{18}B_{17}\dots B_0$, where each digit $B_n = \{0, 1, 2, 3, 4, 5, 6, 7, 8, 9, '?'\}$. Line 3 contains a total of M cards P in the Lucky Pool, where $20 \leq M \leq 250$, and P belongs to visible characters.

Output Specification:

Output the highest possible total point value after the addition.

Example 1:

Input:

```
100000000000000000?  
500000?000000000?321  
#@!FBa041235667709+325811_0$*kYTV!~%%NAQ
```

Output:

```
600000900000000008328
```

Example 2:

Input:

```
40708000000?000000?  
300100?0?123456789??  
542?%06654+32571_=/@@0$*#ErR!~(&BbQ?gqvT20
```

Output:

```
70718070612945678960
```
